Dorstab FS

Product Description

Dorstab FS is a general purpose Barium-Cadmium – Zinc liquid heat stabilizer for use in flexible PVC calendaring and extrusion applications.

Dorstab FS provides good early color and long-term thermal stability in calendaring and extrusion application. Dorstab FS has been developed to slightly lubricating. Lower levels of processing lubricant are therefore required. This reduces the tendency for plate out. Dorstab FS is suitable for use in clear, filled or pigmented systems.

Typical properties

Physical form	liquid
Density (25°c)	0.96±0.02
